# Palladio™ Quick-Fit connection

## The new quicker and easier door handle fitting for the Palladio™ range

Palladio™ Quick-Fit handles will transform the way fabricators supply door sets in the future.

Winkhaus have launched the new Quick-Fit connection system as standard on its popular lever handle range with the new option of fitting either the very popular Palladio™ or solid brass or chrome Mirage levers.

The Quick-Fit connection delivers improved and easier handle fitting, reduced risk of damage to handles and finished door-sets during transportation and a consistently high performance over time. **The handles are simply pushed together on to the square spindle in a matter of seconds with the backplate already fitted to the door sash.** If a change of colour or design is required or the handle lever has been damaged the levers can be replaced very easily using the supplied release tool.

The levers and backplates are supplied separately in the same 'tear off' packaging so the fitting of levers can be left until the customer hand-over, if desired. This means no protruding handle levers until the door is actually installed, so each door-set is less bulky to transport. This will provide significant extra capacity in every delivery load, cutting the carbon footprint of transportation and reducing the risk of handle damage.

The Quick-Fit connection enhances the outstanding characteristics of Palladio™ handles which will continue to offer performance assurances such as BS EN1906: 2002 Grade 3 and the highest level Grade 4 corrosion resistance to EN1670 on all finishes.

Palladio™ Series handles feature 92mm centres and are suitable for door thickness 44 - 70mm. Installation uses M5 machine screws which are colour matched for an aesthetically superior finish, and all handles have a 10 Year Operational Guarantee.

Silver or gold anodised or white powder coated backplates are available with matching Palladio™ lever

### Features and benefits

- Quick and easy snap-fitting of levers on site without need for tools.
- Easily removed with supplied tool.
- Levers fitted just prior to hand-over reducing risk of transport or trades damage.
- Allows doors to be transported without levers fitted maximising truck load capacity which in turn reduces transport costs and carbon footprint.
- The Quick-Fit design reduces the risk of sagging or loose levers.
- Choice of levers and pads with the option to mix and match finishes and backplates.

 If an external fixed pad is required, a standard (non Quick-Fit) Palladio™ handle set should be specified
